“WORLD CLASS”

In November of 2010 Idaho Forest Group completed a major log infeed, merchandising and log sorting upgrade to their Chilco, ID Sawmill facility. The project started in August of 2009 and took an estimated fifteen months to complete and was divided into multiple phases of install & start-up. The reason for this was to keep the existing log infeed/equipment in operation while installing and commissioning the new at the same time dismantling the old and taking minimal downtime in the plant while the installation commenced.

Versatile Fab & Machine was the major equipment supplier of not only the log merchandiser system, but the stem/log infeed decks, conveyors, defect chop saw, merchandiser outfeed log sorting conveyors & log decks and a various of other fabricated mechanical & structural components that totaled over 3,000,000 lbs.

This project would have not been as successful without the hard work, organization, patients and diligent efforts from Brad Macaulay & David Krulic from “VFM”. I have been working with Brad & Versatile since 1996 and his company’s attention to detail, time line & workmanship is nothing short of **“World Class”**.
